

Specialized workshop

Save the money on compressed air!

The current extreme cost increasing of the electrical energy significantly increase the compressed air production costs as well. Compressed air is about 20-30 % from the electrical energy consumption in each factory. If you need to save money, sign up for our specialized workshop focused on effective methods to achieve a maximal savings on the compressed air production.

Main topics:

- » the costs of compressed air production
- » air pressure and energy consumption
- » economical solutions of modern compressors
- » heat recovery systems
- » air treatment savings
- » leakages - wasted energy
- » measuring and monitoring of compressed air and technical gases and other tips to save energy and money...

Workshop is intended for:

The knowledge gained at the seminar will be appreciated in particular by energy keepers, building administrators, chiefs of maintenance department, financial managers and top-managers of the industrial companies.

General informations:

- » one day workshop; time schedule from 8 am until 4 pm
- » seminar conducted in Czech or English
- » venue - training room in VSK Profi, s.r.o. headquarters
- » accommodation ensured (paid by the customer)
- » snacks and lunch included
